1.BUSINESS PROCESS DEFINITION

1.What is the Book Borrowing Process?

Is the procedure followed by a library user to borrow a book from library for reading or study and return it within specific period.

2.Why does the library need this process?

* It helps the library keep track of books borrowed and returned by users

*It helps the library know who has borrowed each book and who is responsible for returning it

*It helps librarians identify books that have not been returned on time

*It allows many users to share library resources fairly

*It encourages users to take good care of borrowed books

3.What problem does it solve?

*It helps the library identify who borrowed a book and hold them responsible for returning it

*It keeps accurate records of borrowed, returned and available books

*It helps the library track students who fail to return books on time

*It helps librarians identify overdue books and apply library policies

*It makes borrowing and returning books more organized and efficient

4.What should happen successfully at the end of the process?

The student gets the book and the library knows who borrowed it and it should be returned.

2. ACTOR AND RESPONSIBILITIES

1.Who requests to borrow a book?

A student who is registered by librarian

2.Who checks and handles the borrowing requested?

The librarian

3.Who or what verifies whether a book is available?

The librarian verifies whether the requested book is available using library management system

4.Are there any other people or systems involved?

Yes

*Library management system: available book and borrowing record

*Database: keep student record, book information, borrowing history

*Library administrator: manages borrowing rules and policies

3. PROCESS SEQUENCE AND DECISIONS

1.What event starts the process?

Student requests to borrow a book

2.What happen first?

Search for a book

3.What happen next?

The student presents the selected book to the librarian

4.Is there a point where someone must make a decision?

Yes, by thinking you will take the book or not

5.What different outcomes can follow that decision?

If yes means you will take the book

If no means you will not take the book

6.What events marks the end of the process?

* You are allowed to borrow the book

* You are not allowed to borrow the book

4. DATA_GENERATING ACTIVITIES

1.CREATE: what new information is recorded?

. Borrowing ID

. Student ID

. Book ID

. Borrowing Date

. Return Date

. Librarian ID

. Borrowing Status

2.RETRIEVE: what existing information is checked?

. Student information

. Borrowing History

. Book information

. Book availability

3.UPDATE: what information may need to change?

. Book availability status

. Student borrowing record and history

. Borrowing status

. Book record

4.DELETE: is any information ever removed?

. Cancelled borrowing request

. Duplicate records

5.ARCHIVE: what information may be stored for future references?

. Book information

. Return history

. Student information

. Overdue record

5. BUSINESS PROCESS EXPLANATION

1.PROCESS INITIATION: how does the process begin?

The process initiation begins when a registered student identifies a book they need and decides to borrow it from the library.

2.PROCESS PROGRESSION: How does it move from beginning to end?

The process progresses through a series of activities, starting with the student's search for a book and submission of a borrowing request. The librarian verifies the student's eligibility, and the system checks book availability. If both conditions are satisfied, the request is approved, the borrowing transaction is recorded, the book status is updated, and the book is issued to the student. Otherwise, the request is rejected or the student is informed that the book is unavailable

3.ACTOR RESPONSIBILITIES: what does each participant do?

The student initiates the borrowing request, while the librarian checks and processes it. The Library Management System verifies information and manages borrowing transactions. The database stores all relevant records, and the notification system communicates borrowing confirmations and return reminders.

4.DECISIONS: what decisions are made, and what outcomes are possible?

The Book Borrowing Process involves decisions about student eligibility, book availability, and successful recording of borrowing transactions. These decisions determine whether the request is approved, rejected, delayed, or completed successfully

5. INFORMATION MANAGEMENT: how is information created, checked or updated?

Information management in the Book Borrowing Process involves creating new borrowing records, retrieving existing student and book information, updating book availability and borrowing status, deleting unnecessary temporary records, and archiving completed transactions for future reference. These activities ensure accurate record keeping and effective library management
